Expansion Joint Work

Expansion joint is an assembly designed to hold parts together while safely absorbing temperature induced expansion and contraction of building materials, and vibration, or to allow movement due to ground settlement or seismic activity.

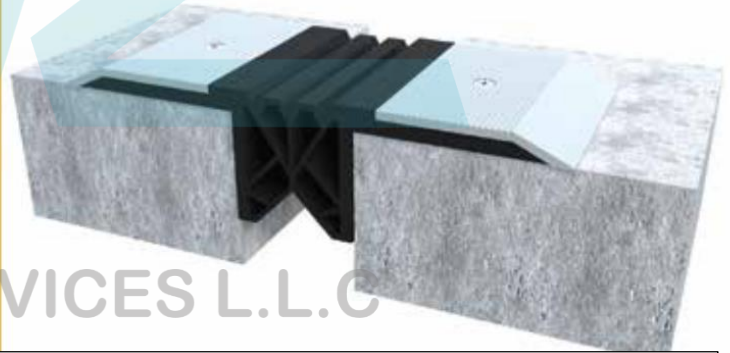

Seismic Floor Profile

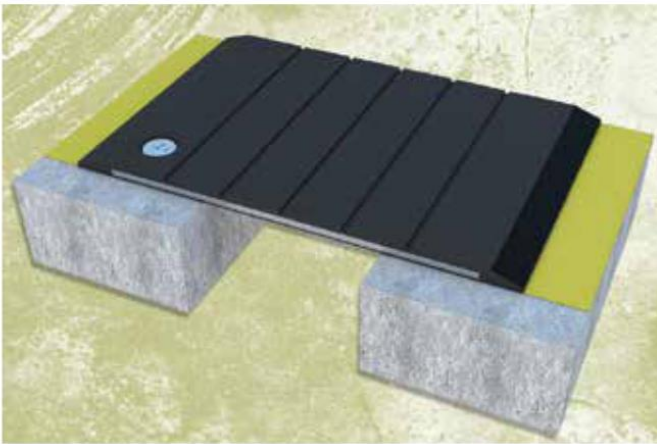

Sub Coating Type Water Tight Profile

Over Coating Type Water Tight Profile

Heavy Vehicular Traffic Expansion joint profile

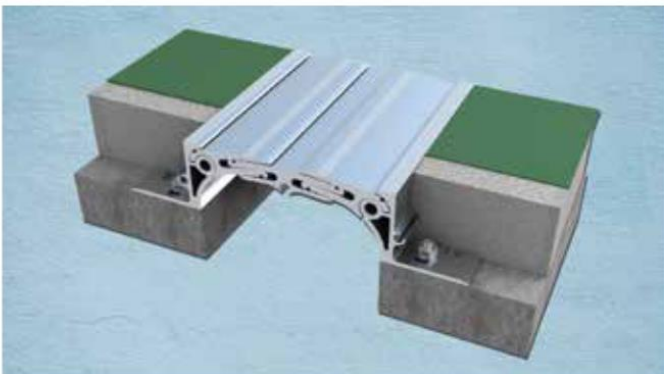

Over Coating Type Water Tight Profile

Selecting the Right Profiles

Nominal joint width - Gap
Application method & location (flush mounted or surface mounted)

Coating thickness (h)
Load capacity
Movement ability

Heavy Duty Flush Mounted Profile

Movement Directions

Horizontal movement

Horizontal & lateral shear movements

Horizontal, lateral shear & vertical movements

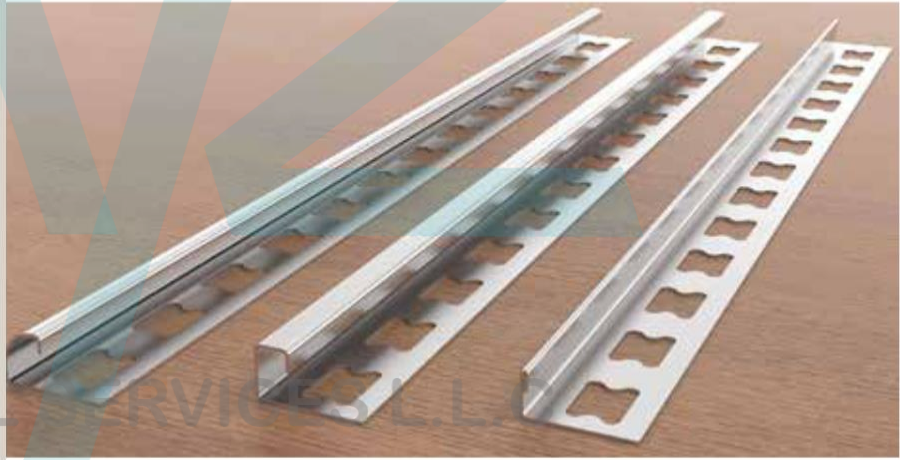

Tile Trims & Transition Profiles

Tile Trims are used at the junctions of tile to tile or tile to non-tile covered surfaces to protect external corners and ensure smooth finish.

Transition profiles are used to cover the two different material joints on the floor or wall whether there's a level difference or not.

Ramps & reducers provide functional and aesthetic solutions to eliminate the level differences at junction of different floorings.

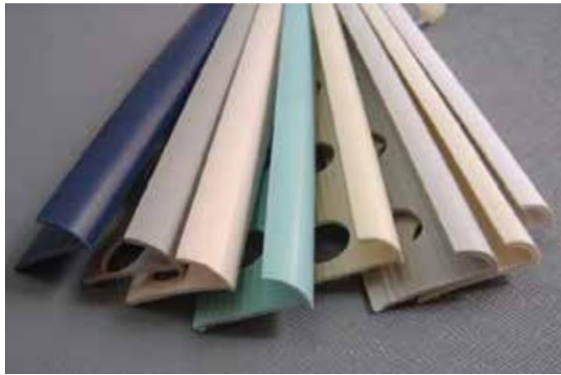

Can be manufactured in Aluminum, Stainless Steel, PVC etc, in different size and finish.

Corner Profile

PVC Trims

Carpet Profile

Tactile Indicators

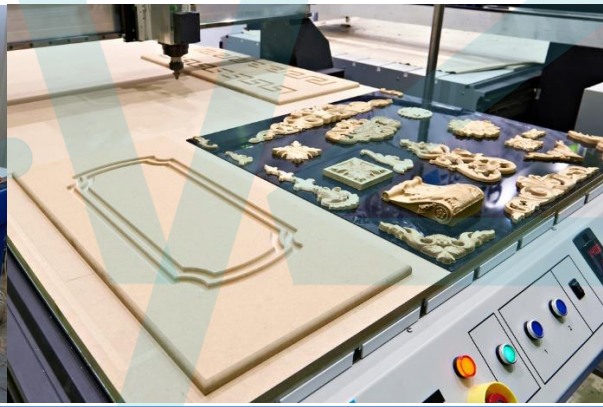

Tactile Indicators are products made from various materials installed into the ground consisting of a series of raised studs or bars. They are installed in the form of laid paving units, individual mushroom shaped studs drilled and fixed into the ground or mats glued to the ground surface.

The purpose of Tactile Ground Surface Indicators (TGSI) is to give pedestrians who are blind, or who have vision impairment warning of hazards and directional information to aid navigation of the urban environment.

Decorative Bricks Work

Vinyl Flooring

Vinyl Flooring

Vinyl flooring is a practical method to transform your space into a beautiful one. In addition to ergonomic environments conducive to healing, Vinyl flooring offer top indoor air quality solutions, hygiene that provides walking, rolling and acoustic comfort.

This versatile product is environmental friendly and phthalate free.

Areas of Application

- | | |
|-------------|--------------------|
| Healthcare | Leisure |
| Education | Transport Industry |
| Workplace | Indoor Sports |
| Hospitality | Wellness |

Luxury Vinyl Tiles (LVT)

Vinyl Sheet

Indoor Sport Flooring

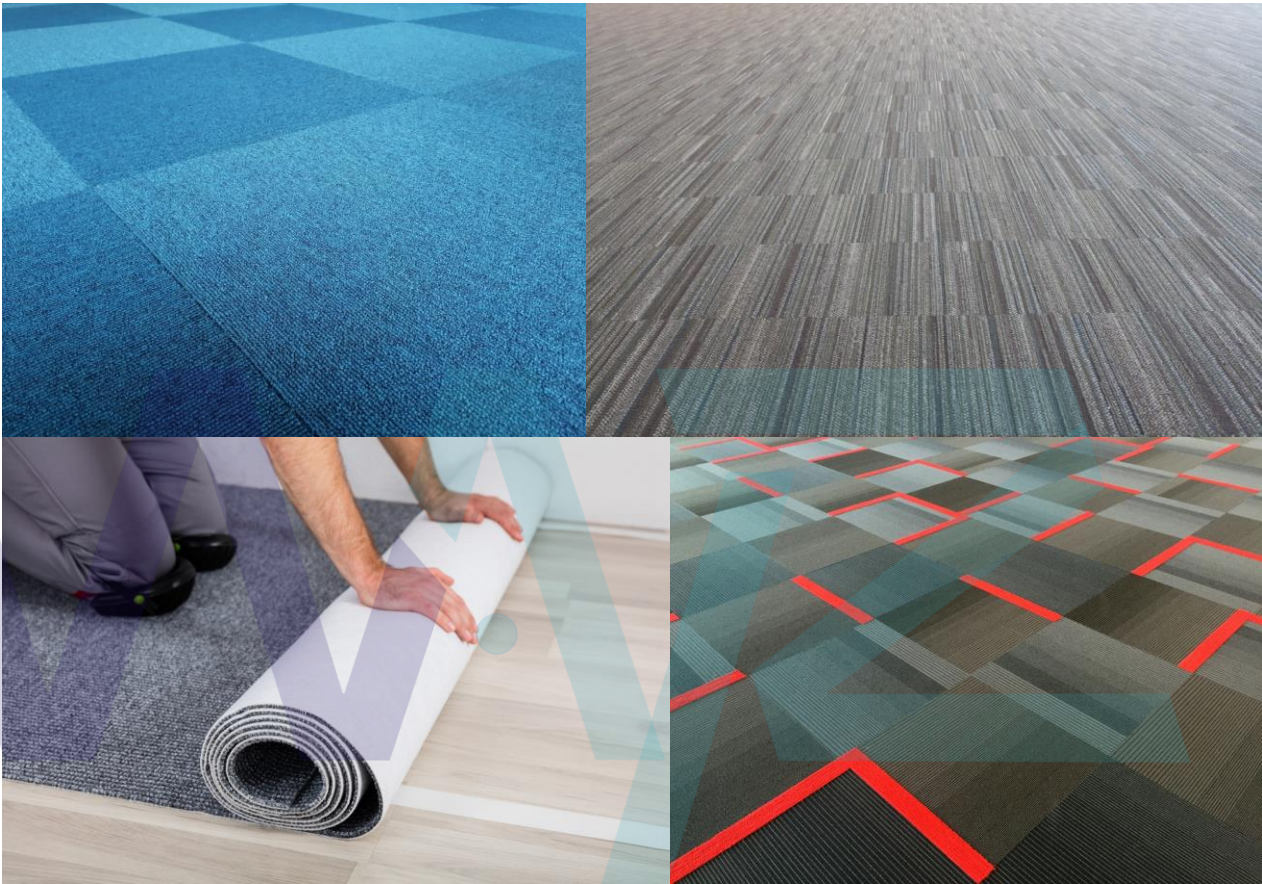

Gym Rubber Flooring

Carpet Flooring

Carpet tiles are suitable for use in contemporary office environments. Carpet tiles are a particularly flexible carpet solution which makes for very easy access to the floor underneath. This means that technicians can easily gain access to underfloor cables, which is especially important in rooms that are constantly subject to change.

WAYZ TECHNICAL SERVICES L.L.C

All Kind of Waterproofing

Bituminous membranes

Waterproofing and protection of bituminous membranes for various applications: rooftops, wet area, gardens, tunnels.

Epoxy-based waterproofing

Epoxy resin based coating with high abrasion resistance and high waterproofing features for concrete and metals surfaces.

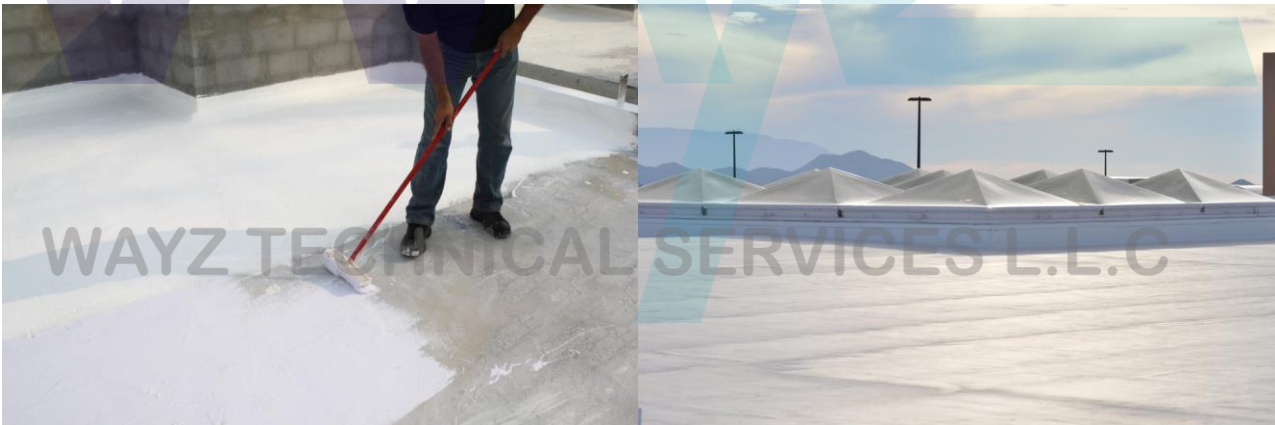

Bituminous liquid membranes

Cold applied bituminous coating primers and rubberized bituminous emulsion that acts as general waterproofing, damp-proof membranes and vapor seal for a variety of substrates.

Polyurethane liquid membranes (white color)

Liquid applied polyurethane waterproofing membranes for different applications and specifications from retaining walls to rooftops.

Coal tar liquid membranes (2)

Coal tar epoxy based coating for steel and concrete used as an anticorrosive and on underwater areas.

Cement-based waterproofing (8)

Cement base waterproofing products for swimming pools, water tanks, foundations...

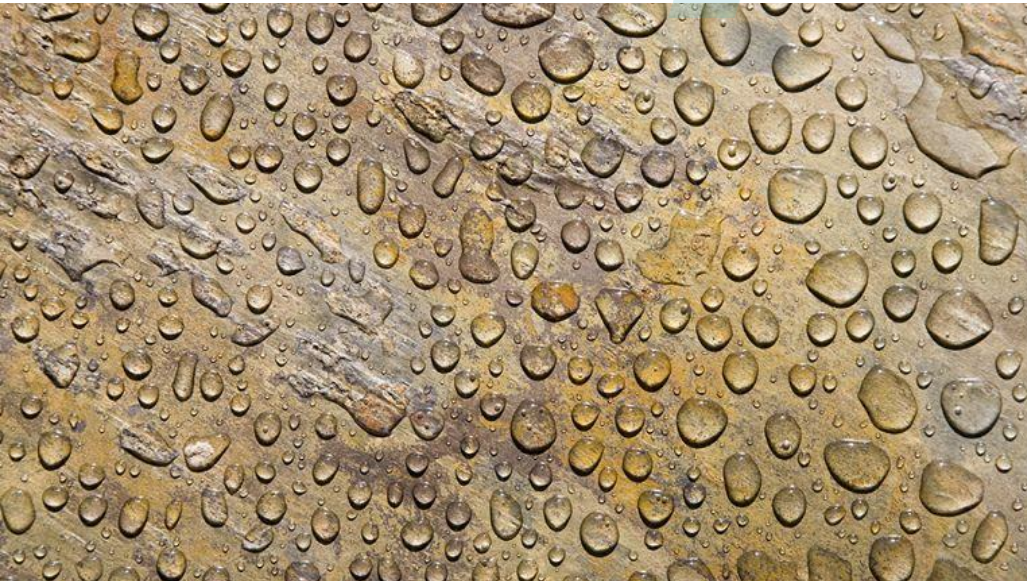

Acrylic-based waterproofing (6)

Acrylic based flexible waterproofing products for under-tiling area and roofing.

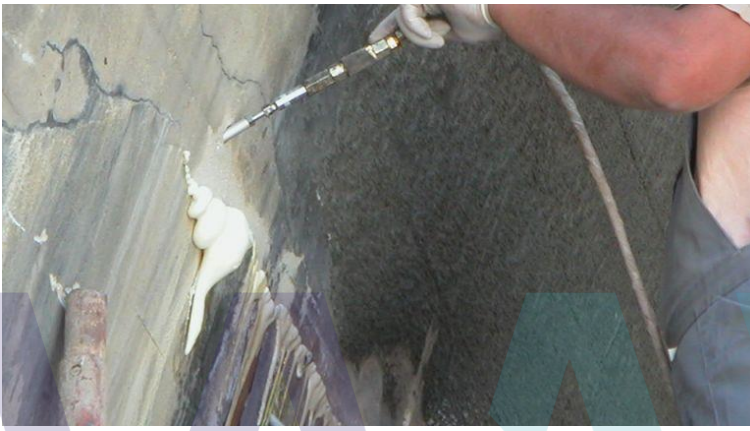

Surface water-repellents (4)

Surface water base repellent products for tiles, stones and grout protection.

Polyurethane injection (2)

Polyurethane injection products for water sealing of cracks and joints in wet and dry structures.

Joint sealants (9)

Polyurethane and Polysulphide base, cold applied elastomeric sealants with excellent adhesion and bonding to most materials.

Silicone sealants (3)

Silicone sealant multipurpose use for sealing joints and to protect against moisture.

Geotextiles (2)

Nonwoven geotextile range for filtration, separation, and protection.

Waterstops (3)

Waterproofing sealing of construction and expansion joints, in different types and sizes.

Block & Plaster work

Interlock Installation

Tile Work
